INSTRUCTIONS FOR INSTALLATION AND USE

SCAN 47

Approved according to EN 13240

This manual is accompanied by a pamphlet with General Instructions for Installation

Edition 08.05 - GB

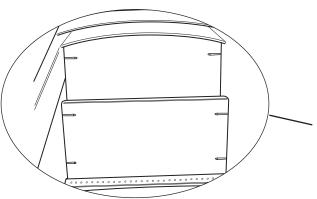

Congratulations on your new SCAN stove!

You have chosen a product from one of Europe's leading manufacturers of wood-burning stoves. We are convinced that your stove will be to your full satisfaction and give you many hours of pleasure if you follow the advice and instructions of this manual.

Please read this manual as well as the General Instructions for Installation before beginning the installation.

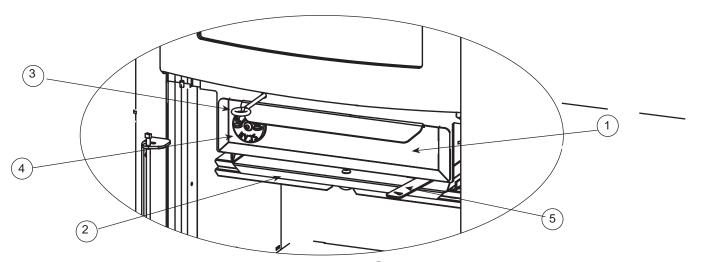

Clean combustion

The SCAN 47 uses the "CB technique" (Clean-Burn) to ensure an optimally clean combustion. The extra combustion air is preheated and led into the combustion chamber close to the ceramic smoke deflector.

Ceramic smoke deflectors

Lift up the lower ceramic smoke deflector, pull out the pins in the lateral combustion chamber plates and remove the deflector. The upper deflector is removed in the same way.

- (1) **Ashtray.** When you open the door in front of the wood compartment, you have access to the ashtray, which is placed below the combustion chamber. Attention! Be careful when you empty ashes from the stove. There may be embers left for up to 24 hours after the stove was last used.
- 2 Lid for ashtray. Under the ashtray you will find a lid to put on top of the ashtray when you carry it out for emptying.
- 3 Handle for shaking grate. The stove is equipped with a shaking grate. When you activate the grate handle, the ashes from the combustion chamber are emptied into the ashtray.
- 4 Regulation for primary air. Turn the air valve in order to open. The primary air is used when lighting and refuelling the stove. It should always be closed during continuous firing.
- 5 Regulation for combustion air. Push the button sideways. Left position is closed and right position is open. The air is used for combustion and regulates the output of the stove.

The ashtray, shaking grate, and primary air should always be closed during continuous firing.

SCAN 47

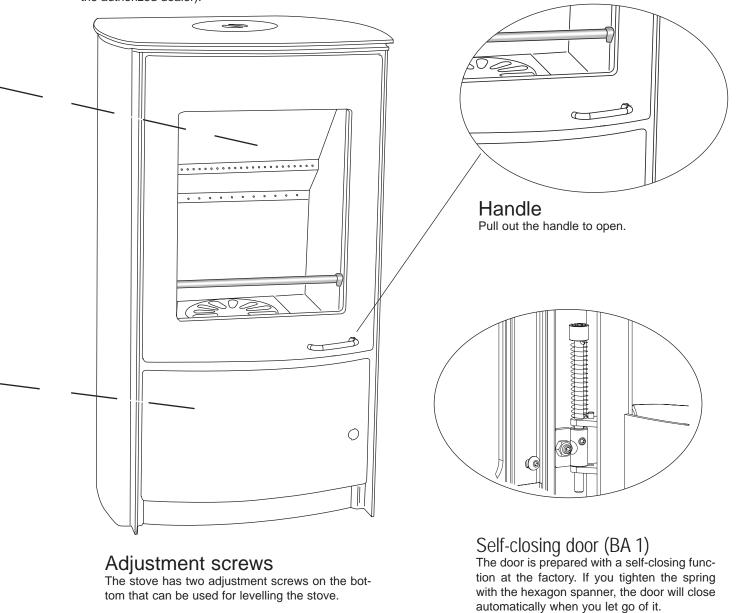

Accessories

For this model you can have the following accessories:

- · Lateral covering in soapstone
- · Lateral covering in stainless steel
- · Soapstone-top plate
- · Connection piece for fresh-air intake

The stove can be prepared for an external air supply where fresh air is let directly into the combustion chamber (can also be done subsequently by the authorized dealer).

Data for calculation of the chimney and adjustment of the air according to EN 13240:

Combustion air	Primary air	Max. fuel	Chimney draught, min.	Flue outlet flow	Temperature of flue outlet		Fuel consump- tion	Efficiency
%	%	kg	Pa.	g/s	behind flue collar oC	kW	kg/h	%
60	25	1.5	11	7.1	195	7.4	2	84
